Immersion cooling fluids is a cooling medium used for IT components and other electronic equipment, including complete servers and storage equipment. When the equipment is immersed in a thermally conductive dielectric fluid, the circulating liquid is in direct contact with the hot components, and then heat is removed from the system through a cold heat exchanger. Fluids have very good insulating properties to ensure they can safely come into contact with energized electronic components.

The global Immersion Cooling Fluids market size was estimated at USD 2183.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
