Abstracts

The immune system protects the body from harmful things such as a virus, germs, and diseases like cancer. It is a network of cells, molecules: and organs present throughout the body. The immune system attacks the foreign substance that is found in the body. The body identifies and destroys the abnormal cells including cancerous cells. The inherent self-defense system comprises cells, which help the body in the identification of foreign molecules. Different pathways regulate various immune cells for distinguishing body's healthy cells and disease-causing foreign agents such as a virus: parasite, bacteria, fungi, and cancerous cells. To maintain the body's defense against the continuously evolving organisms, which try to attack the body in numerous ways, continuous modification of all the components of the immune system is essential. Sometimes, the continuously modifying immune system reacts against the body's cells, considering them as foreign agents, which results in the destruction of healthy tissues and becomes the cause of autoimmune diseases and cancers. The inherent state of unresponsiveness may also be observed due to the weakened body defense owing to the genetic reasons that result in immunodeficiency disease.One of the major drivers for this market is growing cases of infectious diseases. Infectious diseases such as hepatitis and acquired immunodeficiency syndrome (AIDS) are rampant globally. When the body's immune system is unable to resist the invading pathogens or microbes, it gives way to infections. Infectious diseases such as hepatitis and AIDS can be treated by immunomodulators. Agents that help in boosting the immunity of the human body help in resisting pathogens. According to the CDC, there are more than a million AIDS-affected people in the US. With the rising incidences of infectious diseases, the demand for immunology products will increase in the following years.

The global Immunology market size was estimated at USD 74570.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the
