Abstracts

Immunostimulatory adjuvants are pharmacologically active substances incorporated into vaccines to enhance, accelerate, and prolong the specific immune response to co-administered antigens, acting as catalysts for immunogenicity without independently conferring protection; these agents function by modulating innate immune pathways such as activating pattern recognition receptors (e.g., TLR agonists), promoting antigen-presenting cell maturation, or stimulating cytokine production thereby tailoring the quality, magnitude, and durability of adaptive immunity, which is particularly critical for improving vaccine efficacy in vulnerable populations, overcoming antigenic weaknesses, or developing vaccines against challenging pathogens like HIV, malaria, or cancer.

The global Immunostimulatory Adjuvants market size was estimated at USD 550.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
