Abstracts

Impact crushers are a type of machinery commonly used in industries such as mining, construction, and recycling. They are designed to reduce the size of materials, such as rocks, ores, and other hard materials, by using a high-speed impact force. The material is fed into a chamber, where it encounters rapidly moving hammers or blow bars mounted on a rotor. These hammers strike the material, causing it to break apart and reduce in size. The crushed material is then ejected from the bottom of the crusher, either as the final product or further processed in additional crushing stages.

The global Impact Crusher market size was estimated at USD 1028.74 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
