Abstracts

Implantable contact lenses (ICLs) are advanced vision correction devices surgically inserted into the eye, typically positioned between the iris and the natural lens, to treat refractive errors such as myopia, hyperopia, and astigmatism in patients who are not ideal candidates for laser procedures like LASIK due to thin corneas, extreme prescriptions, or dry eye syndrome. Unlike traditional contact lenses that rest on the surface of the eye or eyeglasses, ICLs are made of biocompatible materials like collamer, which integrates with the eye's natural fluids to provide stable, long-term correction without altering the corneal structure, offering reversible and high-quality visual outcomes.

The global Implantable Contact Lens market size was estimated at USD 750.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.82% during the forecast period.
