## Abstracts

In-car projection technology (ICP) integrates optical projection systems into the interior or exterior of a vehicle for information display, interactive enhancement, safety alerts, or ambient lighting. Using micro-display technologies such as laser, LED, LCOS, and DLP, ICP projects images or information onto windows, windshields, interior surfaces, or the ground, creating an immersive visual experience and intelligent interaction. Typical applications include AR-HUD (augmented reality head-up display), large in-car projection screens, welcome light carpets, digital headlights, and ambient projection. This technology emphasizes automotive-grade stability, vibration resistance, high brightness, low power consumption, and optical precision. It is a key component of smart cockpit and intelligent lighting systems and is becoming standard in high-end vehicles.

The global In-Car Projection Technology market size was estimated at USD 4977.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.00% during the forecast period.
