## Abstracts

In-Line PVD Sputtering System is a device for depositing thin films on a substrate. In this system, the substrate moves linearly along a specific path, successively passing through multiple sputtering cathodes, bombarding the target with high-energy ions, causing the target atoms to eject and form a film on the substrate. The system has a high deposition rate, uniform film quality and good adhesion, suitable for film deposition of a variety of materials, widely used in touch panels, displays, Low radiation (low-E) glass and other fields.

The global In-Line PVD Sputtering System market size was estimated at USD 4159.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
