### Report Overview

The in-mold coating (IMC) process incorporates coating into the molding process. This process reduces the amount of solvents needed and provides beneficial environmental impacts. The use of IMC with injection-molded parts has the potential for reducing, or eliminating, the volatile organic compounds associated with the painting process. To date, the IMC process has been successfully applied to sheet molding compound compression-molded parts to provide a primed surface that can then be electrostatically painted in a separate process.

In-mold coatings have been finding significant applications in automotive and buildings and constructions, sanitary products, etc. APAC and Europe are key regions in terms of the industrial sectors at a global level and are anticipated to grow further in the near future with regard to the industry, which in turn, is expected to create significant opportunities for growth of the regional in-mold coatings market over the forecast period.
