Report Overview:

The in-mold coating (IMC) process incorporates coating into the molding process. This process reduces the amount of solvents needed and provides beneficial environmental impacts. The use of IMC with injection-molded parts has the potential for reducing, or eliminating, the volatile organic compounds associated with the painting process. To date, the IMC process has been successfully applied to sheet molding compound compression-molded parts to provide a primed surface that can then be electrostatically painted in a separate process.

The Global In-Mold Coatings Market Size was estimated at USD 7568.58 million in 2023 and is projected to reach USD 9576.67 million by 2029, exhibiting a CAGR of 4.00% during the forecast period.
