### Report Overview

In-mould label is the use of paper or plastic label during the manufacturing of containers by blow molding, injection molding, or Others processes. The label serves as the integral part of the final product, which is then delivered as pre-decorated item.

Combining the decoration process with the moulding process cuts the total cost, but can increase the manufacturing time. The back surface of the in mold label melts with heat of the under processed molded container and after the cooling label forms a strong bond with container. The technology was first developed by Owens-Illinois in cooperation with Procter & Gamble to supply pre-labelled bottles that could be filled on the product filling line.
