Abstracts

In-Store Fulfillment Software is a technology solution that allows retailers to use their physical stores to fulfill online orders. This software integrates online sales channels and physical store inventory management, allowing customers to place orders online and then pick up the goods in the physical store or have the store ship directly. This software helps improve order fulfillment efficiency, optimize inventory management, and provide more flexible logistics solutions. The in-store fulfillment software market is rapidly evolving, with its upstream and downstream structure becoming increasingly clear: the upstream encompasses POS systems, ERP, e-commerce platforms, and inventory management systems, while the downstream connects logistics providers, customer terminals, and store employees. As retail stores gradually transform into "micro-distribution centers," companies are leveraging AI and IoT technologies to implement predictive picking and inventory replenishment, improving inventory turnover efficiency. At the same time, "wave fulfillment" is evolving towards a "waveless" model to enhance real-time responsiveness. Combined with the integration of robotic picking systems and smart shelves, the entire fulfillment process is becoming highly automated and intelligent, providing solid support for omnichannel retail.

The global In-Store Fulfillment Software market size was estimated at USD 2149.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
