The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on In-Vehicle Central Control Screen Panel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global In-Vehicle Central Control Screen Panel production reached approximately 11.95 million Pcs, with an average global market price of around US\$ 340 per Pc. The in-vehicle central control screen panel is a large display module installed in the central control area (center console) of a car. It is mainly used to integrate functions such as infotainment, navigation, vehicle status, air conditioning control, and intelligent cockpit interaction. It typically serves as the core of the driver-passenger interface, requiring high brightness, high image quality, high touch response, wide temperature adaptability (e.g., -40° to +85°), vibration and shock resistance, long-term reliability, and automotive-grade certification. With the development of smart cockpits and software-defined vehicles, the central control screen panel not only serves as a display function, but also increasingly serves as an interactive platform for touch, voice, multimedia, networking and driver assistance information. The upstream of the central control screen panel includes glass substrates and cover plates (such as Corning, AGC Inc., etc.), polarizers and optical films (such as Nitto Denko, 3M, Sumitomo Chemical), liquid crystal wafer/TFT panel manufacturers (such as BOE Technology Group, Samsung Display, LG Display), touch modules, backlight modules, driver ICs (such as Texas Instruments, Novatek), etc. Companies integrating these panels into automotive systems include OEMs (such as Tesla, BYD, Volkswagen AG) and suppliers of cockpit systems and HMI (human-machine interface) modules (such as Continental AG, Denso Corporation, Visteon Corporation). Upstream raw materials determine the panel's brightness, color gamut, reliability, and cost, which in turn determines the specifications, touch/interaction functions, and mass production delivery

schedule for downstream OEMs. The annual production capacity of a single-line In-Vehicle Central Control Screen Panel is approximately 800k Pcs, with a gross profit margin of approximately 15%?30%.

The global In-Vehicle Central Control Screen Panel market size was estimated at USD 4063.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
