Abstracts

An in-vehicle emergency calling system is an ?in-vehicle?emergency call service system that enablescommunication lines in case of an accident or failure of vehicles. The system consists of an automated and manualeCalling system. It comprises a voice response delivered to the emergency service provider via an automated call to anemergency number. The automated call is generated in response to certain events such as the breakdown of thevehicle, deployment of airbags, or a vehicle crash.The growth of this in-vehicle emergency calling system market is heavily influenced by safety regulations enforced by the European Union. Meanwhile, from 2018, all passenger cars and light commercial vehicles must be equipped with an emergency call function. This has led to a surge in demand for eCall technology across the globe. However, eCall technology is not yet mandatory in many regions, which may hinder product adoption in the first few years of the forecast period. Due to stringent safety regulations in Europe, similar vehicle safety rules are expected to be adopted in many regions, which will drive the growth of the industry globally.

The global In-vehicle Emergency Calling System market size was estimated at USD 2394.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
