The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on In-vehicle Occupancy Detection Radar Sensor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The In-vehicle Occupancy Detection Radar Sensor is a key component that uses millimeter-wave technology to detect the presence of passengers within the vehicle. These sensors provide reliable detection of occupancy status, promoting energy-efficient operation while enhancing vehicle safety and convenience. In 2024, production is estimated to reach approximately 1.2 million units, with an average price of USD 150 per unit. Industry average gross margin of around 35%. The key upstream components for the In-vehicle Occupancy Detection Radar Sensor include microwave RF components, wafers, gallium nitride (GaN), and gallium arsenide (GaAs), with major suppliers such as Skyworks Solutions, Qorvo, and Cree. The midstream covers sensor design, integration, and testing, while the downstream applications are primarily in passenger and commercial vehicles, with representative customers including Ford, General Motors, and BYD. The market outlook for In-vehicle Occupancy Detection Radar Sensors is highly promising, driven by the increasing focus on vehicle safety, comfort, and energy efficiency. As automotive manufacturers continue to innovate with advanced driver assistance systems (ADAS) and smart vehicle technologies, the demand for sensors that accurately detect the presence of occupants is growing. These sensors play a crucial role in enhancing safety systems such as airbag deployment, seat belt tensioning, and climate control, while also enabling energy-efficient vehicle operation by adjusting interior conditions based on occupancy status. With the rise of electric vehicles and the development of autonomous driving technologies, the need for reliable and cost-effective occupancy detection solutions is expected to grow significantly. Furthermore, continuous advancements in radar miniaturization and signal

processing technologies will drive down costs and improve performance, fostering broader adoption in both passenger and commercial vehicles.

The global In-vehicle Occupancy Detection Radar Sensor market size was estimated at USD 180.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 30.00% during the forecast period.
