Abstracts

The in vitro controlled capsule gastroscopy is a new type of non-invasive digestive tract examination device. It uses wireless remote control technology to guide the capsule to move in the stomach, achieving real-time imaging and precise examination. The patient only needs to swallow the capsule, and the doctor can use an external magnetic field or other control methods to adjust its position to obtain high-quality stomach images to assist in disease diagnosis. Compared with traditional gastroscopy, it is more comfortable and non-invasive, and is suitable for patients who are uncomfortable or contraindicated with conventional gastroscopy.

The global In Vitro Capsule Gastroscopy market size was estimated at USD 380.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
