Abstracts

In vitro fertilisation (IVF) is a process of fertilisation where an egg is combined with sperm outside the body, in vitro. The process involves monitoring and stimulating a woman's ovulatory process, removing an ovum or ova (egg or eggs) from the woman's ovaries and letting sperm fertilise them in a liquid in a laboratory. The fertilised egg (zygote) undergoes embryo culture for 2-6 days, and is then transferred to the same or another woman's uterus, with the intention of establishing a successful pregnancy. Geographically, the in vitro fertilization market in Asia Pacific accounts for the largest share of the global market, followed by Europe. The large share and high growth rate of the APAC region can be attributed growth in the median age of first-time motherhood, rising infertility rates, growing prevalence of PCOS, increasing incidence of obesity, rise in fertility tourism, and government initiatives.

The global In Vitro Fertilization market size was estimated at USD 613.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
