## Abstracts

Polio vaccines can be classified into two types: the inactivated polio vaccine (IPV) and oral polio vaccine. Oral polio vaccine is more active than IPV as it has both weakened and live poliovirus. Inactivated polio vaccine is a vaccine prepared from suspension of inactivated (killed) poliovirus strains with formalin. It is an injectable vaccine that can either be given alone or with other vaccines. IPV has the ability to provide serum immunity against all the three types of poliovirus and consequent protection against paralytic poliomyelitis. Rabies virus is transferred to humans through the saliva of an animal who is infected by it. Inactivated rabies virus (IRV) is injected before or after the infection of the virus in 1 ml doses having 2.5 IU per ml of rabies virus antigen. The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022.
