Report Overview

Incident and emergency management refers to the standardized approach, to be at times of emergency. Incident management is often performed by a dedicated team, inside an organization, who are responsible for identifying, analyzing and prevention of hazardous incidents. The team is also conferred the duty of preparing standards, which are to be followed, during such incidents. Such Incident management teams often rely on third party services and hardware for performing their duties. Emergency management can also be termed as disaster management and mostly relates to the large scale disasters, such as those caused by nature, terrorist activities and industrial accidents among others. Emergency management encompasses the procedures to be followed, on knowledge of an upcoming disaster or post a disaster. Emergency management aids in taking preventive measures for a known upcoming disaster, such as a storm or an oil spill spreading towards coast among others, and also aids in limiting further loss post a calamity. Natural disasters cannot be prevented by human efforts, but incident and emergency management strongly aids in limiting all types of losses, post such an incident.
