### Report Overview

Incline friction coefficient tester is an instrument used to measure the friction force generated when materials move relative to each other on an inclined plane. It usually consists of an inclined surface and a test sample placed on it. By applying a horizontal force or applying an angle to the incline, the test specimen slides or rolls on the incline, creating friction. Incline friction coefficient testers can be used to evaluate the friction characteristics between materials for appropriate material selection and performance optimization in engineering, design and production.
