Report Overview

Indene (CAS 95-13-6) is a hydrocarbon compound primarily derived from coal tar, characterized by its bicyclic structure consisting of a benzene ring fused with a cyclopentene ring. It serves as a key intermediate in the production of indene-coumarone resins, which are extensively used in adhesives, coatings, and rubber compounding due to their excellent binding and waterproofing properties. Additionally, indene is utilized in the synthesis of specialty chemicals, pharmaceuticals, and fragrances. The market demand for indene is closely tied to industrial applications, particularly in the construction and automotive sectors, where its derivatives enhance material performance. However, fluctuations in coal tar availability and environmental regulations regarding coal tar processing may impact production dynamics. Growing emphasis on sustainable alternatives could influence future demand, though indene remains integral to niche applications requiring high-performance resins.
