Abstracts

Indirect Evaporative Coolers are energy-efficient cooling systems that reduce air temperature without adding moisture to the air being cooled. They use a heat exchanger to transfer heat from the incoming air to water, which evaporates to cool the air indirectly. This process keeps the cooled air dry, making it suitable for applications requiring consistent humidity levels, such as data centers, industrial facilities, and commercial buildings. Indirect evaporative cooling is valued for its low energy consumption, eco-friendliness, and ability to operate effectively in dry and hot climates.

The global Indirect Evaporative Coolers market size was estimated at USD 1102.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.50% during the forecast period.
