Report Overview:

Indirect restorative material choices include all-ceramic, porcelain-fused-to-metal, cast-gold and cast-metal. Indirect tooth restoration involves customized tooth replacements in the form of crowns, onlays, or inlays. A crown covers the entire chewing surface of a tooth, an inlay lies within the cusps of the tooth, and an onlay covers and one or more cusp tip, including part of the chewing surface. An indirect tooth restoration will require more than one office visit because the inlay or onlay must be fabricated in a lab. Crowns, inlays and onlays can be made from a variety of materials. Gold is still used for some inlays, but for someone concerned about white teeth, porcelain and tooth-colored composite resins are other options.

The Global Indirect Restorative Materials of Dental Consumables Market Size was estimated at USD 261.43 million in 2023 and is projected to reach USD 412.56 million by 2029, exhibiting a CAGR of 7.90% during the forecast period.
