Abstracts

Indole acetic acid (IAA) is the main form of auxin, which participates in many physiological activities in plants, and has important physiological functions such as promoting seed germination, cutting rooting and inducing flower bud differentiation. Indole acetic acid oxidase (IAAO) can convert indole acetic acid. Oxidation makes it lose its activity, and its activity plays an important role in regulating the level of indoleacetic acid in the body. Indoleacetic acid can react with FeCl_3 under acidic conditions to produce a red product, which has a maximum absorption peak at 530 nm, and the activity of indoleacetic acid oxidase can be characterized by measuring the consumption rate of indoleacetic acid.

The global Indoleacetic Acid Oxidase Activity Detection Kit market size was estimated at USD 25.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
