Report Overview

Indoor air quality (IAQ) is a term which refers to the air quality within and around buildings and structures, especially as it relates to the health and comfort of building occupants. IAQ can be affected by gases (including carbon monoxide, radon, volatile organic compounds), particulates, microbial contaminants (mold, bacteria), or any mass or energy stressor that can induce adverse health conditions. Source control, filtration and the use of ventilation to dilute contaminants are the primary methods for improving indoor air quality in most buildings. Residential units can further improve indoor air quality by routine cleaning of carpets and area rugs.

The industry's leading manufacturers are TSI, FLUKE and Honeywell Analytics, which accounted for 10.51%, 9.56% and 6.96% of revenue in 2019, respectively. By region, North America has the highest share of income, at 44.24% in 2019.
