The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Indoor Full-Color LED Display competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Indoor Full-Color LED Display production reached approximately 0.83 million Sqm, with an average global market price of around US\$ 2000 per Sqm. Indoor full-color LED displays are visual terminals based on a pixel matrix, composed of a large number of red, green, and blue (RGB) light-emitting diode (LED) modules. They are designed for close-range, high-definition display indoors. They utilize varying pixel pitches (P values) and modular panels to create screens of any size and aspect ratio. They offer high brightness, high contrast, wide viewing angles, and seamless splicing. They are commonly used in conference and control center backdrops, exhibition halls, stages, shopping mall signage, and corporate image walls. Compared to LCD splicing or projection, LED screens offer advantages in color saturation, viewing angles, and lifespan. The product line ranges from fine-pitch, high-resolution professional screens (P0.9?P2.x), to P2.5?P4/P6 rental screens for stage and rental applications, and finally, to economical business displays.

The global Indoor Full-Color LED Display market size was estimated at USD 1661.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
