Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Indoor Golf Simulation System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The indoor golf simulation system is a dedicated structure designed for the golf simulator system. It is mainly used to provide an enclosed space that simulates the golf course environment and has a built-in golf simulator system. It is usually equipped with screens, projectors, sensors and other necessary equipment to simulate the actual golf course environment. Some basic functions are to protect the equipment: provide a closed environment to protect the golf simulator equipment and sensors, and prevent weather conditions (such as rain, wind and sand, etc.) from damaging the equipment. Simulation experience: create an enclosed space so that users can simulate and experience the real golf course environment indoors. Usually equipped with high-definition projectors and sensors to provide realistic visual and motion feedback. Precision measurement: equipped with high-precision sensors and cameras to track the flight trajectory of the golf ball, the swing angle of the club, the strength of the shot, etc., and provide detailed data analysis. Environmental control: helps to control environmental factors such as light, temperature and humidity to ensure the consistency and accuracy of the simulation experience. Some basic uses are practice and training: provide a place for golf enthusiasts and professional players to practice and train even in bad weather conditions. Entertainment: in family or social occasions, as an entertainment facility, let users experience the fun of golf without being restricted by the external environment. Tournaments and Games: Used to host virtual golf tournaments and games, especially in indoor locations or places where it is difficult to access a real golf course. Data Analysis: Provides detailed data analysis for coaches and players to help improve swing techniques and on-course strategies and optimize player

performance. As people spend more time at home, there's a rising demand for recreational activities that can be enjoyed within the household. Indoor golf simulation systems offer an ideal solution, providing a private, all-weather golfing experience. As environmental concerns become more pronounced, manufacturers in Europe, in particular, may focus on creating sustainable indoor golf simulation systems. As the trend of home-based entertainment continues, the demand for indoor golf simulation system is expected to grow in both the U.S. and Europe. Advances in simulator technology, including more realistic graphics, better data analytics, and VR integration, make indoor golf simulation systems increasingly appealing. As the technology becomes more accessible and affordable, more users are interested in creating personal golf spaces. Even in an uncertain economy, certain segments of the population continue to spend on luxury and high-end home improvements. An indoor golf simulation system represents an investment in home leisure, appealing to affluent consumers who value convenience and a premium experience. Beyond residential settings, there is potential for growth in commercial spaces such as gyms, hotels, and corporate environments in both Europe and the U.S. These settings could offer indoor golf simulation systems as part of their amenities, attracting customers seeking unique and convenient golf experiences.

The global Indoor Golf Simulation System market size was estimated at USD 1118.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
