Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Indoor Thin Film Solar Cell competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Indoor Thin Film Solar Cell reached approximately 197.59 MW, with an average global market price of around US\$ 442.9 per KW. Gross margin is about 27%. The cost is 380.8 usd. Production Capacity is about 260.00-280.00 MW. Indoor Thin Film Solar Cells are made up of photovoltaic cells that capture and convert solar power into electricity. The portable panels are then attached to one another and connected to a battery to store the energy produced by the sun. The upstream of the Indoor Thin Film Solar Cell industry chain mainly includes suppliers of key components such as silicon wafers, solar cells, glass, encapsulation materials and inverters, while the downstream covers panel manufacturers, residential users, building integration and small energy system application markets, forming a complete closed loop from raw material supply, component production to installation and after-sales service. China has implemented the Renewable Energy Law since 2006, in which Article 4 clearly states that, the State gives first priority to the exploration of renewable energy. Over the years, various departments of the Chinese government have successively issued a large number of policies, covering production, sales, taxation, subsidies and other aspects. After setting the carbon neutrality goal in 2021, from a national perspective, the upgrading of the energy structure is ever imperative, and therefore the optoelectronic industry has great potential. The European Commission released the Net-Zero Industry Act in 2023. This bill aims to stimulate local manufacturing in Europe, reduce import dependence on China, and ensure that at least 40% of the EU's clean energy demand can be met by 2030. The EU targets an installed solar capacity of 600 GW. Overall, the European market still has a lot of room for development. US 2022 release of the Inflation

Reduction Act, which includes \$369 billion for energy security and climate change investments. For the photovoltaic industry, the bill stimulates its development from multiple aspects such as corporate and individual tax credits, production subsidies, and loans throughout the industry chain, and revitalizes the domestic manufacturing industry in the United States. Japanese authorities plan to make solar panels mandatory for new residential buildings in Tokyo from 2025 onwards. It is estimated that by 2030, photovoltaic power generation will account for 14%-16% of Japan's total power generation, and the cumulative installed capacity of photovoltaic systems will be about 117.443 GW.

The global Indoor Thin Film Solar Cell market size was estimated at USD 87.51 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.30% during the forecast period.
