Abstracts

An inductive absolute angle encoder is a position sensor used to accurately measure angles. It works on the principle of inductance and can provide contactless angle measurement. The encoder uses inductive coupling to determine the angular position of an object by sensing changes in magnetic fields or currents. Unlike traditional incremental encoders, inductive absolute angle encoders can provide independent, absolute angle information at any position without the need for re-referencing or zeroing.

The global Inductive Absolute Angle Encoders market size was estimated at USD 433.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
