## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Industrial 3D Structured Light Camera competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Industrial 3D Structured Light Camera is a type of optical sensing system used to capture precise three-dimensional data of objects or environments by projecting a known pattern of light (often a grid or series of stripes) onto the surface. The deformation of the projected pattern, caused by the contours of the object, is then analyzed by the camera to reconstruct the 3D shape and geometry. These systems are commonly used in industrial applications such as quality control, inspection, reverse engineering, and robotics, due to their ability to capture high-resolution and accurate surface details in real-time. The industrial 3D structured light camera market is experiencing significant growth, driven by the increasing demand for precise and efficient 3D imaging solutions across various sectors. Structured light technology, which projects patterns onto objects to capture detailed surface geometry, is particularly valued for its high accuracy and speed. Industries such as automotive, electronics, and manufacturing are adopting these cameras for applications like quality inspection, robotic vision, and measurement tasks. The integration of structured light cameras with automation and robotics enhances production efficiency and product quality. Furthermore, advancements in sensor technology and image processing algorithms are improving the resolution and reliability of these systems, making them more accessible to a broader range of applications. As industries continue to prioritize precision and automation, the demand for industrial 3D structured light cameras is expected to rise, solidifying their role in modern manufacturing and quality assurance processes.
