Abstracts

Accumulation roller chains are specialized conveyor chains designed to transport and accumulate items or products on a production line. Unlike standard conveyor chains, accumulation roller chains allow items to accumulate (or stack up) without stopping the movement of the conveyor itself. This feature is particularly useful in manufacturing and packaging processes where products need to be temporarily stored or queued before moving to the next stage of production.

The global Industrial Accumulation Roller Chains market size was estimated at USD 158.65 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 2.90% during the forecast period.
