Abstracts

An Industrial Addressable Fire Detection System is an intelligent fire safety solution specifically engineered for large commercial and industrial facilities. Its key feature is that every device within the system (such as smoke detectors, heat sensors, manual call points, etc.) is assigned a unique electronic address or identifier. In the event of an alarm or fault, the central Fire Alarm Control Panel (FACP) can precisely pinpoint which specific device, and thus the exact location within the building, is reporting the event. The system operates using digital signals and typically employs a loop configuration for device communication, providing detailed real-time status information (e.g., smoke density, device health). This allows for fast and accurate fire localization, reduction of false alarms, and facilitates efficient system maintenance and integrated control (such as activating suppression systems or closing fire doors).

The global Industrial Addressable Fire Detection System market size was estimated at USD 600.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
