## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Industrial Anchors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of industrial anchors reached 18.5 billion units, with an average selling price of US\$0.085 per unit. Industrial anchors are mechanical fastening components used for fixing concrete, masonry, and steel structures. Products include expansion anchors, chemical anchors, sleeve anchors, and wedge anchors, and are widely used in infrastructure, rail transportation, wind power, photovoltaic supports, industrial equipment installation, and large public building construction. Global total production capacity is approximately 23 billion units per year, with an average gross profit margin of 18-25%. Upstream materials mainly consist of carbon steel (Q235/Q345), stainless steel (304/316), galvanized steel wire, and epoxy resin (for chemical anchors). Producing 10,000 industrial anchors typically requires 0.65 tons of steel and 8-12 kg of resin/curing agent (chemical). Downstream consumption is comprised of approximately 55% for building structure fixing, 20% for equipment installation, 15% for new energy (wind power/photovoltaic), and 10% for transportation infrastructure. Global infrastructure and urban renewal demands continue to drive demand for "rigid and stable" anchoring products; wind turbine towers, substations, and photovoltaic supports are experiencing rapid growth in demand for high-strength and corrosion-resistant anchors; increased certification requirements (ETA/ICC) in European and American markets are providing premium pricing for high-quality suppliers; meanwhile, rising construction volumes in Southeast Asia and the Middle East are creating incremental opportunities for Chinese production capacity to spill over overseas. Future developments primarily focus on high-performance alloy anchors, seismically certified anchors, anchors for extreme environments, and intelligent

installation monitoring systems, offering opportunities for both technological upgrades and expanding demand.

The global Industrial Anchors market size was estimated at USD 1573.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
