Report Overview

Industrial Articulated Endoscope is an endoscope device for industrial inspection and maintenance. It consists of a flexible probe with a hinge mechanism and a display or image transmission system.

The probe of a hinged endoscope typically consists of multiple foldable hinges, which allow it to be guided and maneuvered in straight and curved pipes, pipe bends, or other tight spaces. The hinge design allows the endoscope to be adjusted and positioned in different angles and directions for observing and inspecting the target area. This type of endoscope usually has an illumination system that can provide light either through a built-in light source or through fiber optic delivery. Some hinged endoscopes are also equipped with cameras and image transmission systems, which can transmit the observed images to the display screen or recording device in real time, so that users can observe and analyze them. Industrial hinged borescopes can be widely used in various industries, such as pipeline inspection, aerospace, automobile maintenance, building construction, electronic equipment maintenance, etc. They can be used to inspect the interior of pipes for blockages, damage, cracks, corrosion, and other areas that are difficult to access directly. Through the flexibility of the hinge mechanism and the support of the image transmission system, the hinged endoscope can provide convenient and accurate visual inspection and maintenance solutions.
