### Report Overview

An individual battery or a battery pack designed exclusively for professional or industrial use is an industrial battery. An industrial battery consists of two electrodes connected by an electrolyte, which allows the flow of current, converting chemical energy to electric power. Industrial batteries are the energy source for most suppliers and manufacturers and lead-acid based, lithium based and nickel based batteries are the common families of industrial batteries.

Industrial batteries are rigid and generally used in difficult-to-reach or remote areas where appliances need to be self-powered. In these situations, replacement or re-charging of batteries is not an easy alternative or is entirely impossible. Hence, failure of battery often results in device failure. Therefore, it is essential that industrial batteries are capable of providing reliable power to devices, so they may operate for as long as needed.
