Report Overview

Industrial biogas upgrading solutions are technologies and processes designed to purify raw biogas into high-quality biomethane, which can be used as a renewable energy source. Biogas, typically composed of methane (CH₄), carbon dioxide (CO₂), water vapor, and trace amounts of other gases, is produced through the anaerobic digestion of organic materials like agricultural waste, food waste, sewage sludge, and other biomass. Upgrading biogas involves removing the non-methane components to increase the methane concentration, making it suitable for injection into natural gas grids, use as vehicle fuel, or other applications.
