Abstracts

Industrial cellular glass is a type of lightweight, porous material made from glass. It is produced by mixing glass powder with a foaming agent, heating the mixture to a high temperature until the glass melts and the foaming agent releases gas, creating a network of small, closed - cell pores within the glass matrix. This results in a material with a low density, excellent thermal insulation properties, and high compressive strength. Industrial cellular glass is widely used in various industrial applications, such as in the insulation of pipelines, storage tanks, and buildings. It is also resistant to moisture, chemicals, and fire, making it suitable for use in harsh environments.

The global Industrial Cellular Glass market size was estimated at USD 578.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.60% during the forecast period.
