The Industrial Computed Tomography market covers High Energy Industrial CT, Low Energy Industrial CT, etc. The typical players include GE Measurement & Control, Yxlon International, ZEISS, Nikon Metrology, North Star Imaging, etc.

X-ray computed tomography is a well-known method in clinical diagnostics, which is becoming more and more present in the field of industrial NDT. While the basic principles are common for both fields, a medical CT scanner requires a complex system of a rotating X-ray source and detection system - the so called gantry - to keep the patient in a stable position, whereas in an industrial CT system, the object itself can be easily rotated by a turntable. An increasing number of industries are discovering that X-ray CT scanning is a vital tool to ensure the highest product quality. Some of the key uses for industrial CT scanning have been flaw detection, failure analysis, metrology, assembly analysis and reverse engineering applications.
