Report Overview

Industrial Control Systems (ICS) are specialized computer-based systems designed to monitor and control industrial processes, machinery, and infrastructure across sectors such as manufacturing, energy, water treatment, and transportation. These systems encompass supervisory control and data acquisition (SCADA), distributed control systems (DCS), and programmable logic controllers (PLCs), integrating hardware and software to automate operations, enhance efficiency, and ensure safety. ICS are critical for real-time data acquisition, process optimization, and remote management, often operating in harsh environments with high reliability requirements. Their applications range from regulating assembly lines in automotive plants to managing power grids and oil refineries, making them indispensable in modern industrial ecosystems. The increasing adoption of IoT and Industry 4.0 technologies is driving further convergence between ICS and IT systems, though this also raises cybersecurity concerns due to their vulnerability to cyber threats.
