Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Industrial Detergent Enzymes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global industrial detergent enzyme production reached 162,000 tons, with an average selling price of US\$4,651 per ton. Industrial detergent enzymes are enzyme preparations produced through biotechnology specifically for the detergent industry. They are biocatalysts used in detergent formulations, breaking down staining molecules such as proteins, starches, fats, and cellulose under mild conditions, improving removal efficiency and reducing energy consumption. They are widely used in household laundry detergents, laundry detergents, dishwashing liquids, industrial laundries, and in the medical and food service sectors. From an upstream and downstream supply perspective, the upstream sector primarily includes suppliers of the microbial strains required for enzyme production (genetically engineered high-yield strains) and fermentation raw materials (such as carbohydrates, nitrogen sources, and other culture media). The midstream sector comprises enzyme preparation manufacturers, and the downstream end-users are large global consumer chemical companies and industrial and institutional detergent manufacturers.

The global Industrial Detergent Enzymes market size was estimated at USD 753.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
