Abstracts

Industrial Edge AI Devices refer to intelligent hardware specifically designed for industrial environments, integrating artificial intelligence (AI) inference capabilities with edge computing functions. These devices typically feature powerful processors (such as GPUs, NPUs, FPGAs), multiple industrial-grade sensor interfaces, and communication modules, enabling real-time data acquisition, processing, and intelligent analysis directly at production sites or device endpoints. They perform tasks such as machine vision inspection, predictive maintenance, anomaly detection, process optimization, and intelligent control without relying heavily on cloud data transmission. This approach significantly reduces latency, improves decision-making efficiency, and enhances data security and local privacy compliance. Industrial Edge AI Devices are widely applied across sectors such as smart manufacturing, energy and utilities, automated production lines, smart logistics, industrial robotics, and petrochemical industries, making them essential components in the implementation of Industrial IoT (IIoT) and Industry 4.0 strategies.
