Abstracts

An industrial electrofusion coupler is a fitting used to join plastic pipes through electrofusion technology. It is primarily composed of a conductive coil and polyethylene material. When current is applied, the conductive coil generates heat, melting the interface between the fitting and the pipe, creating a strong and secure weld. Electrofusion couplers are widely used in water supply, gas distribution, chemical pipelines, and mining drainage systems due to their high strength, corrosion resistance, and reliable connections.

The global Industrial Electrofusion Coupler market size was estimated at USD 985.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
