Report Overview

System-on-a-Chip (SoC) technology, as the name suggests, is basically an integration of several electronic components on a single IC chip to form an electronic system. A standard SoC design consists of IP cores and peripherals. The SoC IP consists of Processor IP, Analog IP, Digital IP, Memory IP, (ASIC) Application Specific IP, (FPGA & PLD) Programmable IP, and Data Converter IP. Mixed Signal SoC (MxSoC, in short) is a relatively new category in SoC, which is designed for mixed signal (handling both analog and digital purposes). Today the application. area of mixed signal technology has spread across all the end-user sectors; right from Computers & ICT sectors to Consumer Electronics, Industrial, Medical, and others. Technological advancements in IC technology have enabled a system level integration on a System-on-a-Chip making Mixed Signal SoC; a suitable and efficient solution for large scale integrated circuit applications in the semiconductors & electronics industries. The greatest advantage offered by the MxSoC over traditional mixed signal IC system is its smaller form factor and higher efficiency as a complete system in digital and mixed signal electronics.
