Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Industrial Ethylene Urea competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global industrial ethylene urea sales volume was 33,510 tons, with an average selling price of USD 6,651/ton. Industrial ethylene urea has the molecular formula $C_2H_4N_2O$, a molecular weight of 86.09, and is a white to off-white crystalline powder with a melting point of 129-132 °C. It is extremely soluble in water and hot ethanol, and slightly soluble in nonpolar solvents. It is stable at room temperature but can hydrolyze in strong acids/bases to form ethylenediamine and CO_2 . The mainstream process involves the condensation and ring-closure of ethylenediamine and urea. The reaction conditions are mild, and raw material costs account for approximately 70% (ethylenediamine 55%, urea 15%). The plant scale is 1-3 kt/a, with energy consumption, environmental protection costs, and depreciation accounting for 30%. After continuous operation upgrades, the cash cost is approximately 20,000 RMB/ton. With the increasing demand for green building, formaldehyde-free textiles, green pharmaceuticals, and environmentally friendly pesticides, the consumption of industrial ethylene urea continues to grow. Research and development focuses on efficient green synthesis, high-purity pharmaceutical-grade products, and the development of new drugs/materials based on the industrial ethylene urea structure. In summary, industrial ethylene urea is an important heterocyclic intermediate that is environmentally friendly, highly reactive, and widely used, exhibiting irreplaceable advantages in various fields such as formaldehyde removal, textiles, pharmaceuticals, and functional materials.

The global Industrial Ethylene Urea market size was estimated at USD 223.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
