Report Overview

FDM, also known as fused filament fabrication (FFF), is a printing method that builds parts by melting and extruding thermoplastic filament, which a printer nozzle deposits layer by layer in the build area. In FDM printers, a thin filament of thermoplastics (i.e., plastics that melt when heated, solidify at room temperature) is fed into a nozzle. The nozzle heats up and melts the plastic, which is then deposited additively in successive thin layers to build 3D models. Fused deposition modeling (FDM) is often associated with the idea of low-cost industrial 3D printing. In fact, the low cost and relative simplicity of the FDM process make it ideal for use in various industrial applications. Industrial 3D printer built by Aon3D and designed for a range of applications including tooling, jigs and fixtures, end-use parts, and rapid prototyping.
