Abstracts

Industrial fiber lasers represent a class of solid-state lasers that use optical fibers doped with rare-earth elements (such as ytterbium, erbium, or thulium) as the gain medium, where laser light is generated and amplified within the fiber itself. These devices are characterized by their high beam quality, excellent efficiency, compact design, and robustness, making them particularly suited for demanding industrial applications like cutting, welding, cladding, marking, and additive manufacturing. Unlike traditional CO₂ lasers, fiber lasers offer superior electrical-to-optical conversion efficiency, lower maintenance requirements due to the absence of mirrors and gases, and greater flexibility in beam delivery through fiber optics, enabling integration into automated and robotic systems. Their operational wavelengths?typically around 1 ?m for ytterbium-doped fibers?allow for effective interaction with metals and a range of non-metallic materials, positioning them as versatile tools across sectors such as automotive, aerospace, electronics, and heavy machinery.

The global Industrial Fiber Laser market size was estimated at USD 2785.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
