Report Overview

Industrial Flameless Heater is a type of indirect-fired heater that uses a heat exchanger to warm the air without the use of an open flame. Instead of burning fuel directly to produce heat, an industrial flameless heater uses a separate burner to heat a fluid such as oil or glycol, which is then circulated through a heat exchanger to warm the air. Industrial flameless heaters are commonly used in applications where the presence of an open flame is not permitted or where the risk of fire or explosion is a concern, such as in refineries, chemical plants, and other industrial facilities.
