Abstracts

Industrial glass fabrics, also known as fiberglass fabrics, are textiles woven from continuous filament glass yarns and are characterized by their high tensile strength, thermal resistance, chemical stability, and electrical insulation properties. These fabrics are engineered for use in demanding industrial applications, including thermal and acoustic insulation in construction and aerospace, reinforcement in composite materials for automotive and marine industries, protective clothing for high-temperature environments, and as a base material for coatings and laminates in electrical and electronic sectors. The versatility of industrial glass fabrics stems from their ability to be treated with various coatings?such as silicone, PTFE, or vermiculite?to enhance specific performance attributes like fire resistance, water repellency, or abrasion resistance, making them indispensable in environments where conventional textiles would fail.

The global Industrial Glass Fabrics market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
