Abstracts

Industrial grade borax, also known as sodium borate or sodium tetraborate, is a naturally occurring mineral compound ($\text{Na}_2\text{B}_4\text{O}_{10}\cdot\text{H}_2\text{O}$) refined for non-consumable applications where high purity and chemical stability are required, primarily serving as a flux in metallurgy to lower melting points and remove oxides, a key component in glass and ceramic production to enhance thermal shock resistance and durability, a fire retardant in cellulose insulation and wood treatments, a buffering agent in biochemical processes, and a micronutrient in agricultural fertilizers, with its industrial value derived from its boron content which facilitates cross-linking in polymers, neutralizes acids, and modifies viscosity in various manufacturing processes.
