Abstracts

Industrial grade chitosan refers to a deacetylated derivative of chitin, a natural biopolymer sourced primarily from crustacean shells such as shrimp, crab, and lobster, characterized by its high molecular weight, biocompatibility, biodegradability, and cationic nature, which grants it utility in applications such as water treatment for heavy metal and dye removal, agricultural biostimulants and antifungal agents, food processing for clarification and preservation, and textile finishing for antimicrobial properties, differing from pharmaceutical or cosmetic grades due to its lower purity, reduced degree of deacetylation, and cost-effective large-scale production methods tailored for non-medical industrial uses.

The global Industrial Grade Chitosan market size was estimated at USD 285.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.15% during the forecast period.
