## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Industrial Grade Ethyl Mercaptan competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ethanethiol, commonly known as ethyl mercaptan, is an organosulfur compound with the formula  $\text{CH}_3\text{CH}_2\text{SH}$ . It is a colorless liquid with a distinct odor. Abbreviated EtSH, it consists of an ethyl group (Et),  $\text{CH}_3\text{CH}_2$ , attached to a thiol group, SH. Its structure parallels that of ethanol, but with sulfur in place of oxygen. The odor of EtSH is infamous. Ethanethiol is more volatile than ethanol due to a diminished ability to engage in hydrogen bonding. Ethanethiol is toxic in high concentrations. It occurs naturally as a minor component of petroleum, and may be added to otherwise odorless gaseous products such as liquefied petroleum gas (LPG) to help warn of gas leaks. At these concentrations, ethanethiol is not harmful.

The global Industrial Grade Ethyl Mercaptan market size was estimated at USD 57.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
